

WINDOWS 7 FONT SIZE BUG

THE SOLUTION

By editing the Windows registry you can get the original, intended fonts back:

- Open the start menu and type `regedit` and then press Enter.
- Locate the key `HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Fonts`
- Find the value `MS Sans Serif 8,10,12,14,18,24`
- Change from `SSERIFF.FON` to `SSERIFE.FON`
- Find `MS Serif 8,10,12,14,18,24`
- Change from `SERIFF.FON` to `SERIFE.FON`
- Finally find `Courier 10,12,15`
- Change from `COURF.FON` to `COURE.FON`
- Restart your system in order for the changes to take effect!

The exact font names may vary depending on locale settings. Use these tables for reference:

MS Sans Serif 8,10,12,14,18,24	
SSERIFF.FON	SSERIFE.FON
SSERIFFE.FON	SSERIFEE.FON
